

**Tank-Tel Gauge Assembly
Complete with Isolation Valve**

Reorder Modem

**Typical VCS 1500 Level Readings
displayed at dataqwestinc.com Web Site**

The new **TANK-TEL** is a tank monitoring system with telemetry capability designed by Chart Storage Systems exclusively for the industrial gas bulk market. The **TANK-TEL** gauge is a low cost, reliable and user-friendly DP level and pressure gauge. It integrates with Chart's Reorder, Satellite and Cellular/Satellite Telemetry Systems for optimum account deployment. In addition, the **TANK-TEL** can be connected to the industrial and hospital local alert accessories for on site reorder notification. **TANK-TEL** also features integrated software for displaying user-friendly readouts of choice and the level is calculated real-time, based on the pressure in the vessel for optimum accuracy (patent pending).

Complete Telemetry data packages are provided by Scully Signal Systems (Reorder), Cool-Tel (On-site Phone) and DataQwest (Cellular/Satellite). The Reorder system is a call receiver PC system. The On-site Phone and Cellular /Satellite systems can be managed over the Internet at www.onsitetelemetry.net and www.dataqwestinc.com. These secure decision management web services are backed with the very best in data communication technology and redundant infrastructures. With the Internet there is no software to purchase and maintain or IS staff necessary, all your dispatcher needs is an Internet browser and service provider (ISP, i.e. AOL).

Vendor Managed Inventory (VMI) of your bulk gas service enables you to provide these benefits to your customer.

- ◆ Eliminate product outages
- ◆ Eliminate emergency fills
- ◆ Improve customer service
- ◆ Improve customer security
- ◆ Predict distribution schedules
- ◆ Improve distribution efficiency
- ◆ Increase storage tank capacity
